Bob Huggins
University of West Virginia

BASKETBALL CONSTRUCTION

LEGACY™ MATERIAL

The Spalding® exclusive Legacy™ ball provides the player with great moisture management technology. This technology enhances the dry and wet grip of the ball while maintaining durable performance. The Legacy was created with a specifically constructed carcass for a softer feel and deep channel design to optimize overall control. These exceptional features make the Legacy ball the ultimate institutional indoor game ball.

PLATINUM/CLASSIC ZK MATERIAL

This exclusive material with superior dry grip feature is engineered for high caliber indoor play. The durable carcass and heritage channel design provide this ball with consistent control. Spalding® innovative ZK® material provides one-of-a-kind durability with improved control for maximum performance.

1 COVER

The cover material provides superior grip and soft feel while maintaining our rigorous standards for material strength and abrasion resistance.

2 CARCASS

The carcass provides structure, shape and protection for the inner components.

3 WINDINGS

Nylon windings add structural integrity and durability to the construction of the ball.

4 BLADDER

The rotationally balanced butyl bladder maintains the ball with true rebound and extended air retention.

BASKETBALL COVER MATERIAL AND SIZES

INDOOR

An indoor ball is designed exclusively for indoor playing surfaces. These balls are constructed with leather or high-end composite covers.

INDOOR/OUTDOOR

Indoor/outdoor basketballs are suitable for all types of playing surfaces.

OUTDOOR

Outdoor basketballs mostly have a rubber cover that can withstand rough playing surfaces.

BALL CONSTRUCTION

THERMAL HEAT BONDING

1 BLADDER

- Holds air and provides resiliency

2 LINING

- Maintains Shape and Durability (keeps ball round)

3 COVER

- Provides the feel, softness, and aesthetic appeal

Benefits from Thermal Heat Bonding Panel Technology:

- Reduced ball deformation, improved ball durability, and enhanced softness with great touch and feel.
- Seams between panels are formed like tire treads which drain out water without trapping or absorbing moisture under the panel and stitching holes.
- Ultra soft texture surface reduces abrasion on the cover material and gives it a more lively feel.
- Provides a consistent trajectory and true flight.

HAND STITCHED

1 BLADDER

- Holds air and provides resiliency

2 LINING

- Maintains Shape and Durability (keeps ball round)

3 COVER

- Provides the feel, softness, and aesthetic appeal

Benefits from Hand Stitched Panel Technology:

- Multi-ply twisted polyester cord is the material of choice in stitching together a soccer ball.
- Hand sewn balls have tighter and stronger seams. Reinforced polyester stitching is also used on some balls.
